

# 4-group Dice

The white dots on the dice show the 4-group Number Patterns 0-5. The purple dots show the 4-group Number Patterns 5-10. Each side shows a number combination to make ten. Children may count the dots at first, but will soon learn to recognize the numbers at a glance. The 4-group dice can replace traditional dice for many math activities.

At first, use the white dots on each roll of the dice. When children are comfortable with 0-5, use either the white or the purple dots. Let the children choose which number to use on each roll. This develops their critical thinking and strategy skills.
